

Role Focuses

Frontend / UI Implementation Lead — Grace Hechevarria

Responsibilities: Primary owner of React Native screens, camera flow, profile UI, notifications, search, and public pages

Frontend Integration & Validation Lead — Nicole Fonseca

Responsibilities: Handles permission flows, validation messages, session UI, error handling, and frontend protection

Frontend Data Integration Lead — Logan Pritchard

Responsibilities: Connects UI to Google Places, Cloudinary, SendGrid responses, and manages data display

Backend Architecture & API Lead — Andres Lopez

Responsibilities: Owns Misskey backend, Python API wrapper, database schema, endpoints, issue logic, and notification triggers

Sprint by Sprint

Sprint 1 – Account Creation & Login

- Grace: Login and registration screens
- Nicole: Session validation messages and route protection UI
- Logan: Display user profile data on UI after login
- Andres: Build authentication API and connect to user model/database

Sprint 2 – Camera-Only Photo Capture

- Grace: Expo Camera integration and capture screen
- Nicole: Permission prompts and error messages
- Logan: UI flow for camera preview and confirmation
- Andres: Backend endpoint to receive image data

Sprint 3 – Automatic Upload to Cloudinary

- Grace: Upload progress and success/failure display
- Nicole: Frontend validation if upload fails
- Logan: Connect UI to Cloudinary response data
- Andres: Implement upload handling, timestamps, and metadata storage

Sprint 4 – GPS Location Capture

- Grace: GPS capture integration into UI flow
- Nicole: Permission prompts and error handling UI
- Logan: Display coordinates/building suggestions on UI
- Andres: Store GPS data and attach to issue metadata

Sprint 5 – Building Identification with Google Places

- Grace: Building selection interface
- Nicole: Validation if no building is selected
- Logan: Display nearby buildings using API data
- Andres: Process and store building ID with issue

Sprint 6 – Issue Creation & Building History

- Grace: Issue creation form and history display UI
- Nicole: UI validation for required fields
- Logan: Populate building issue history from API data
- Andres: Build issue creation endpoint and database schema

Sprint 7 – Association Email Notifications

- Grace: Notification status UI
- Nicole: Error/status messages for notifications
- Logan: Display association contact/notification results
- Andres: Trigger SendGrid emails and log results

Sprint 8 – Abuse Prevention & Validation

- Grace: User feedback when limits are reached
- Nicole: UI for duplicate/limit errors
- Logan: Show validation results on screen
- Andres: Implement submission limits and hashing logic

Sprint 9 – Public Building View & Search

- Grace: Public building view screens
- Nicole: Ensure UI hides private user data
- Logan: Search UI and results display
- Andres: Build public endpoints and secure data filtering
