

Sprint Schedule, User Stories, and Acceptance Criteria

Role Focuses

Team Member	Role	Responsibilities
Grace Hechevarria	Frontend / UI Implementation Lead	Primary owner of React Native screens, camera flow, profile UI, notifications, search, and public pages
Nicole Fonseca	Frontend Integration & Validation Lead	Handles permission flows, validation messages, session UI, error handling, and frontend protection
Logan Pritchard	Frontend Data Integration Lead	Connects UI to Google Places, Cloudinary, SendGrid responses, and manages data display
Andres Lopez	Backend Architecture & API Lead	Owns Misskey backend, Python API wrapper, database schema, endpoints, issue logic, and notification triggers

Sprint 1 – Account Creation & Login

Sprint	Dates	User Stories	Acceptance Criteria
Sprint 1	02/08 – 02/14	As a new user, I want to create an account with a username and optional email, so that I can use the system without strict verification.	1. Verify that a user can register with a username and password. 2. Verify that email is optional. 3. Verify that usernames are unique. 4. Verify that successful registration logs the user in.
		As a user, I want to log in and log out, so that my account remains secure.	1. Verify that users can log in with valid credentials. 2. Verify that logging out ends the session. 3. Verify that protected routes require authentication.

Team Member	Task
Grace	Login and registration screens
Nicole	Session validation messages and route protection UI
Logan	Display user profile data on UI after login
Andres	Build authentication API and connect to user model/database

Sprint 2 – Camera-Only Photo Capture

Sprint	Dates	User Stories	Acceptance Criteria
Sprint 2	02/09 – 02/15	As a user, I want to take photos using the in-app camera, so that only real-time images can be submitted.	1. Verify that camera permission is requested. 2. Verify that no gallery or file upload option exists. 3. Verify that photos come directly from the camera API.

Team Member	Task
Grace	Expo Camera integration and capture screen
Nicole	Permission prompts and error messages
Logan	UI flow for camera preview and confirmation
Andres	Backend endpoint to receive image data

Sprint 3 – Automatic Upload to Cloudinary

Sprint	Dates	User Stories	Acceptance Criteria
Sprint 3	02/16 – 02/22	As a user, I want my photo to upload immediately after capture, so that it is securely stored with metadata.	1. Verify that upload starts automatically after capture. 2. Verify that uploads include a server-side timestamp. 3. Verify that users can see whether the upload succeeds or fails.

Team Member	Task
Grace	Upload progress and success/failure display
Nicole	Frontend validation if upload fails
Logan	Connect UI to Cloudinary response data
Andres	Implement upload handling, timestamps, and metadata storage

Sprint 4 – GPS Location Capture

Sprint	Dates	User Stories	Acceptance Criteria
Sprint 4	02/23 – 03/01	As a user, I want my GPS location captured when I take a photo, so that issues show where it happened.	1. Verify that location permission is requested. 2. Verify that submissions without GPS data are blocked. 3. Verify that valid latitude and longitude values are stored.

Team Member	Task
Grace	GPS capture integration into UI flow
Nicole	Permission prompts and error handling UI
Logan	Display coordinates/building suggestions on UI
Andres	Store GPS data and attach to issue metadata

Sprint 5 – Building Identification with Google Places

Sprint	Dates	User Stories	Acceptance Criteria
Sprint 5	03/02 – 03/08	As a user, I want to see nearby buildings suggested, so that I can accurately tag an issue.	1. Verify that nearby buildings are retrieved using GPS coordinates. 2. Verify that results include building name and address.
		As a user, I want to select the correct building, so that the issue is linked accurately.	1. Verify that a building can be selected from the suggestion list. 2. Verify that the selected building is stored with the issue.

Team Member	Task
Grace	Building selection interface
Nicole	Validation if no building is selected
Logan	Display nearby buildings using API data
Andres	Process and store building ID with issue

Sprint 6 – Issue Creation & Building History

Sprint	Dates	User Stories	Acceptance Criteria
Sprint 6	03/09 – 03/15	As a user, I want to create an issue with a photo and building, so that infrastructure problems are documented.	1. Verify that issue records store photo, building, timestamp, and user ID. 2. Verify that the issue appears after submission.
		As a user, I want to view issues for a building in chronological order, so that I can view its history.	1. Verify that issues are ordered by date. 2. Verify that resolved issues remain visible.

Team Member	Task
Grace	Issue creation form and history display UI
Nicole	UI validation for required fields
Logan	Populate building issue history from API data
Andres	Build issue creation endpoint and database schema

Sprint 7 – Association Email Notifications

Sprint	Dates	User Stories	Acceptance Criteria
Sprint 7	03/16 – 03/22	As the system, I want to notify associations when an issue is posted, so that they're aware and can take action.	1. Verify that emails are sent on issue creation. 2. Verify that emails include issue details and links. 3. Verify that failed notifications are logged.

Team Member	Task
Grace	Notification status UI
Nicole	Error/status messages for notifications
Logan	Display association contact/notification results
Andres	Trigger SendGrid emails and log results

Sprint 8 – Abuse Prevention & Validation

Sprint	Dates	User Stories	Acceptance Criteria
Sprint 8	03/23 – 03/29	As the system, I want to limit submissions per user, so that spam and abuse are reduced.	1. Verify that daily submission limits are enforced. 2. Verify that users receive an error when limits are exceeded.
		As the system, I want to detect duplicate photo uploads, so that repeated spam is prevented.	1. Verify that duplicate images are detected using file hashing. 2. Verify that duplicate submissions are blocked or flagged.

Team Member	Task
Grace	User feedback when limits are reached
Nicole	UI for duplicate/limit errors
Logan	Show validation results on screen
Andres	Implement submission limits and hashing logic

Sprint 9 – Public Building View & Search

Sprint	Dates	User Stories	Acceptance Criteria
Sprint 9	03/30 – 04/05	As a member of the public, I want to view building issue records without logging in, so that transparency is maintained.	1. Verify that public building pages are accessible without authentication. 2. Verify that no private user data is exposed.
		As a user, I want to search and filter building issues, so that I can find relevant records efficiently.	1. Verify that buildings can be searched by name or address. 2. Verify that issues can be filtered by date or status.

Team Member	Task
Grace	Public building view screens
Nicole	Ensure UI hides private user data
Logan	Search UI and results display
Andres	Build public endpoints and secure data filtering
