

Sprint Schedule, User Stories, and Acceptance Criteria

Sprint	Dates	User Stories	Acceptance Criteria
Sprint 1	02/08 – 02/14	As a new user, I want to create an account with a username and optional email, so that I can use the system without strict verification.	1. Verify that a user can register with a username and password. 2. Verify that email is optional. 3. Verify that usernames are unique. 4. Verify that successful registration logs the user in.
		As a user, I want to log in and log out, so that my account remains secure.	1. Verify that users can log in with valid credentials. 2. Verify that logging out ends the session. 3. Verify that protected routes require authentication.
Sprint 2	02/09 – 02/15	As a user, I want to take photos using the in-app camera, so that only real-time images can be submitted.	1. Verify that camera permission is requested. 2. Verify that no gallery or file upload option exists. 3. Verify that photos come directly from the camera API.
Sprint 3	02/16 – 02/22	As a user, I want my photo to upload immediately after capture, so that it is securely stored with metadata.	1. Verify that upload starts automatically after capture. 2. Verify that uploads include a server-side timestamp. 3. Verify that users can see whether the upload succeeds or fails.
Sprint 4	02/23 – 03/01	As a user, I want my GPS location captured when I take a photo, so that issues show where it happened.	1. Verify that location permission is requested. 2. Verify that submissions without GPS data are blocked. 3. Verify that valid latitude and longitude values are stored.
Sprint 5	03/02 – 03/08	As a user, I want to see nearby buildings suggested, so that I can accurately tag an issue.	1. Verify that nearby buildings are retrieved using GPS coordinates. 2. Verify that results include building name and address.

Sprint	Dates	User Stories	Acceptance Criteria
Sprint 6	03/09 – 03/15	As a user, I want to select the correct building, so that the issue is linked accurately.	1. Verify that a building can be selected from the suggestion list. 2. Verify that the selected building is stored with the issue.
		As a user, I want to create an issue with a photo and building, so that infrastructure problems are documented.	1. Verify that issue records store photo, building, timestamp, and user ID. 2. Verify that the issue appears after submission.
		As a user, I want to view issues for a building in chronological order, so that I can view its history.	1. Verify that issues are ordered by date. 2. Verify that resolved issues remain visible.
Sprint 7	03/16 – 03/22	As the system, I want to notify associations when an issue is posted, so that they're aware and can take action.	1. Verify that emails are sent on issue creation. 2. Verify that emails include issue details and links. 3. Verify that failed notifications are logged.
Sprint 8	03/23 – 03/29	As the system, I want to limit submissions per user, so that spam and abuse are reduced.	1. Verify that daily submission limits are enforced. 2. Verify that users receive an error when limits are exceeded.
		As the system, I want to detect duplicate photo uploads, so that repeated spam is prevented.	1. Verify that duplicate images are detected using file hashing. 2. Verify that duplicate submissions are blocked or flagged.
Sprint 9	03/30 – 04/05	As a member of the public, I want to view building issue records without logging in, so that transparency is maintained.	1. Verify that public building pages are accessible without authentication. 2. Verify that no private user data is exposed.
		As a user, I want to search and filter building issues, so that I can find relevant records efficiently.	1. Verify that buildings can be searched by name or address. 2. Verify that issues can be filtered by date or status.
